Unlike other tools, 7-PDF Maker does not require Microsoft Office. It's available in Freeware and shareware versions. Clinical spectrum of acute cerebral ischemia. A prospective study was carried out to delineate the clinical spectrum of acute cerebral ischemia at a single center. During a 7-year period, all patients admitted with acute cerebral ischemia were included in the study. The clinical features and course of disease were analyzed. During the period of study, 33 patients were admitted with acute cerebral ischemia, of whom 15 had primary subarachnoid hemorrhage, 3 subarachnoid hemorrhage due to spontaneous aneurysm rupture, 12 subarachnoid hemorrhage due to aneurysm rupture, and 3 patients had both subarachnoid hemorrhage due to spontaneous aneurysm rupture and primary subarachnoid hemorrhage. Twenty-six patients underwent hematoma evacuation, and 27 patients underwent clipping or wrapping of aneurysm. Twenty-two patients received a temporary external ventricular drainage. Twenty-one patients were assigned to the modified Rankin Scale (mRS) score of 0-2 at discharge. Seventeen patients had a good outcome, and 6 patients had a poor outcome (mRS score 3-6). All patients with subarachnoid hemorrhage due to aneurysm rupture had a poor outcome ($P = 0.000$). In addition, the rate of a poor outcome was higher in patients with initial coma ($P = 0.004$) and young patients ($P = 0.006$). Early recognition of cerebral 82157476af
